

# Typology: Overnight Hiking Shelter

Location: Lake Clark National Park and Preserve, Alaska

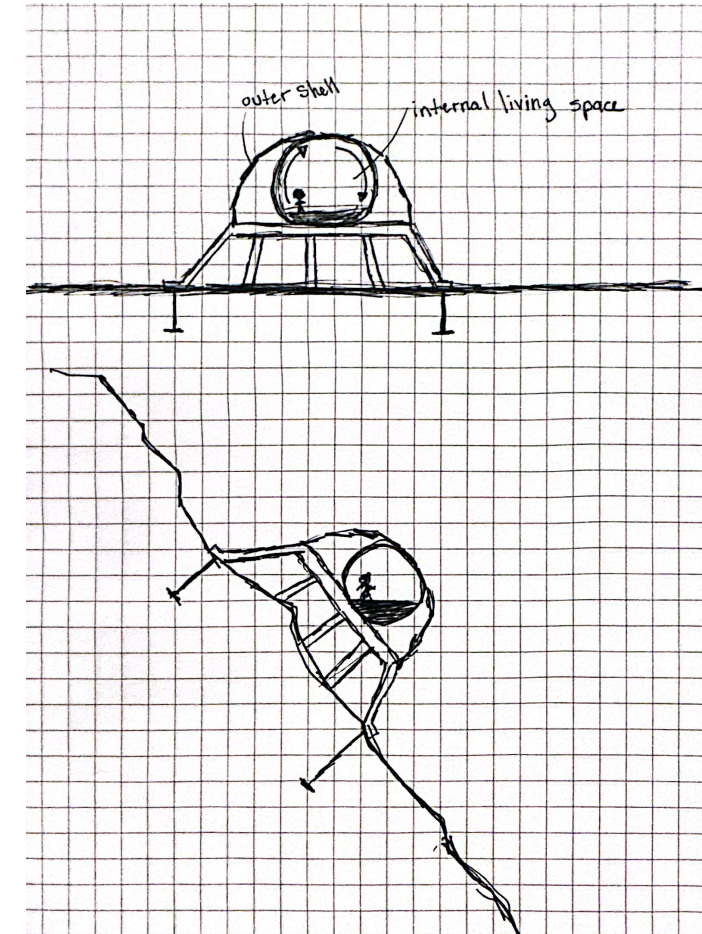

Site

Precedent

Sketches

For this project I want to design a “walking” shelter in Lake Clark National Park in Alaska. The structure would have motorized legs that would allow it to move throughout the park. The design itself would contain an outer and inner shell, the inner shell would be attached using gyroscope technology allowing the floor to stay parallel no matter the orientation of the outer shell.
