

# Point Clouds

## Siofra

Creating the surroundings for siofra river  
I found Lofoten, Norway data using the  
'ArcticDEM GeoTIFF.

There are two versions, left is a larger  
scale including many islands and right is  
a more zoomed in version of one specific  
island.

Both are around 6 GB so they won't load  
into rhino. I plan to get a lower fidelity  
to achieve the same scale but be able to  
load it into rhino

## Manhattan

I also used similar methods to get data  
for studio. Shown are photos of the  
Manhattan point cloud turned mesh and  
the grasshopper script used to implement  
parcels and streets.
